Installing the software for Microsoft SQL Server

To install MagicInfo Server, you must first configure the MicroSoft SQL Server network and authentication settings.

Configuring the SQL Server network

1 Run **SQL Server Configuration Manager**.

2 Set **Named Pipe** and **TCP/IP** under SQLEXPRESS to **enable**.

3 Delete the **TCP Dynamic Ports** values from IP1~IP7 and IP All. (Default value: 0)

4 Set **TCP port** for IP1~IP7 and IP All to 1433.

5 After configuring the network, make sure to restart the SQL Server.

SQL Server authentication

1 Run **SQL Server Management Studio**.

2 Set the authentication mode for SQL Server to **SQL Server and Windows Authentication mode**.

3 After specifying the authentication mode, make sure to restart the SQL Server.

Installation

There are two options to install the software: Express for automatic setup and Advanced for manual setup. You can select either PostgreSQL or Microsoft SQL Server database to install MagicInfo Server.

 Note

• The installation process may vary, depending on the selected setup type and database.

• This user guide assumes that you install the software on PostgreSQL database.
